SE/COMS 319: Exercise 7 (HTML, Javascript/JQuery)

Learning Outcomes: Review+write Javascript/JQuery functions

In this exercise, you will review and write simple javascript functions to realize the specified functionalities. You will use jQuery library and the homework assignment 5 for this exercise assignment.

1. Download hw5.Fall12.a.html and place it in the same folder as hw5.Fall12.html. The file hw5.Fall12.a.html contains unordered list following the specifications described in homework assignment 5. It uses CSS to place the top-level list items horizontally. Use the hw5.Fall12.js that you submitted for homework 5 assignment and check whether it provides a functinoality mimicing an user-interface similar to drop-down menu in hw5.Fall12.a.html. (**Do not update hw5.Fall12.js**).

   Submit a text file (no .doc*); name it ex7.Fall12.<yournetid>.txt. If your implementation in hw5.Fall12.js works for hw5.Fall12.a.html, write "Yes, it works as required"; otherwise, comment on why it does not work.

2. **Backup your hw5.Fall12.js.** Download hw5.Fall12.js from the blackboard and put it in your js folder. Update the newly downloaded hw5.Fall12.js such that at any point of time at most one second level list remains expanded. Test your implementation on both hw5.Fall12.html and hw5.Fall12.a.html.

   You are required to submit the updated hw5.Fall12.js file for this part of the assignment.
